

AWS CloudWatch Interview Questions (3 Years Experience) – Hinglish

1. AWS CloudWatch kya hai?

CloudWatch ek monitoring service hai jo AWS resources aur applications ko monitor karti hai. Ye metrics, logs, alarms aur events collect karti hai.

Example:

- EC2 CPU utilization
 - Memory logs
 - Application errors
 - Billing alerts
-

2. CloudWatch Metrics kya hote hain?

Metrics numerical data hote hain jo resource performance show karte hain.

Examples:

- CPUUtilization
- DiskReadOps
- NetworkIn
- StatusCheckFailed

Default metrics AWS automatically bhejta hai.

3. CloudWatch Logs kya hote hain?

Application ya server logs ko central place pe store karna.

Use cases:

- Linux system logs
- Application logs
- Apache/Nginx logs
- Troubleshooting

CloudWatch Agent install karke logs push karte hain.

4. CloudWatch Alarm kya hota hai?

Alarm threshold cross hone par action trigger karta hai.

Example:

- CPU > 80% for 5 mins
 - Send SNS email
 - Trigger Auto Scaling
-

5. SNS aur CloudWatch ka relation?

CloudWatch Alarm trigger hone par SNS topic ko notification bhejta hai.

Example:

- Email alert
 - SMS alert
 - Lambda trigger
-

6. Detailed Monitoring vs Basic Monitoring

Basic	Detailed
5 min interval	1 min interval
Free mostly	Extra cost
Less granular	More accurate

7. CloudWatch Agent kya hai?

Custom metrics aur logs bhejne ke liye install karte hain.

Use:

- Memory utilization
- Disk usage
- Swap usage

By default EC2 memory metrics nahi bhejta.

8. Log Group aur Log Stream kya hote hain?

- **Log Group** → similar logs ka collection
- **Log Stream** → specific source ke logs

Example:

- Log Group: `/var/log/application`
 - Log Stream: `server1-log`
-

9. CloudWatch Events kya hai?

Ab ise mostly EventBridge bolte hain.

Ye AWS services ke events capture karta hai.

Example:

- EC2 stopped
 - S3 upload
 - CodePipeline status
-

10. Dashboard kya hota hai?

Custom monitoring screen jaha multiple metrics ek jagah dikhte hain.

Use:

- NOC monitoring
 - Infra health
 - DevOps dashboards
-

11. CloudWatch me retention period kya hota hai?

Logs kitne time tak store honge.

Can configure:

- 7 days
- 30 days
- 1 year
- Never expire

12. Custom Metrics kya hote hain?

Jo AWS default nahi deta.

Example:

- App response time
- Queue size
- Active users

Push using:

- AWS CLI
 - SDK
 - CloudWatch Agent
-

13. CloudWatch aur CloudTrail difference?

CloudWatch	CloudTrail
Monitoring	Auditing
Performance metrics	API activity logs
CPU/Memory	Who did what
Real-time alerts	Security tracking

14. EC2 memory utilization monitor kaise karoge?

CloudWatch Agent install karunga:

1. IAM role attach
 2. Install agent
 3. Configure JSON
 4. Start service
 5. Metrics dashboard pe verify
-

15. High CPU alert kaise configure karoge?

Steps:

1. CloudWatch → Alarm
 2. Select EC2 metric
 3. CPU > 80%
 4. 5 minutes
 5. Attach SNS topic
 6. Email notification
-

16. CloudWatch Logs Insights kya hai?

Logs ko SQL-like query se search karne ke liye.

Example:

- Error count
 - Failed login attempts
 - API latency
-

17. Composite Alarm kya hota hai?

Multiple alarms combine karke ek smart alarm banana.

Example:

- CPU high + Memory high together

False alerts kam hote hain.

18. CloudWatch use cases?

- Server monitoring
 - Application troubleshooting
 - Security monitoring
 - Auto scaling triggers
 - Billing alerts
 - Log centralization
-

Scenario-Based Questions

19. EC2 server down ho raha hai kaise troubleshoot karoge?

- CPU metrics check
 - Status checks verify
 - Disk utilization
 - Memory metrics
 - Application logs
 - CloudWatch alarms history
-

20. Logs nahi aa rahe CloudWatch me, kya check karoge?

- Agent running?
 - IAM permissions?
 - Internet/NAT access?
 - Correct log path?
 - Agent config file?
 - Service restart?
-

21. Auto Scaling CloudWatch ke saath kaise work karta hai?

CloudWatch alarm trigger karta hai:

- CPU high → scale out
 - CPU low → scale in
-

Important Commands

```
# Agent status
sudo systemctl status amazon-cloudwatch-agent

# Start agent
sudo systemctl start amazon-cloudwatch-agent

# Check config
cat /opt/aws/amazon-cloudwatch-agent/bin/config.json
```

Interview Tips

3 years experience me interviewer mostly practical scenarios puchta hai:

- Alerts
- Logs troubleshooting
- Monitoring setup
- EC2 metrics
- Auto Scaling integration
- IAM permissions
- CloudWatch Agent setup

Theoretical answers ke saath real project examples bhi dena.
